We design, fabricate, manage, hire and sell sustainable, reusable hoarding solutions

OUR PRODUCTS

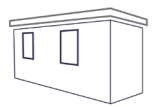

HOARDING

The on-ground Hoard-it system has been independently tested and designed by chartered structural engineers.

BRAND-IT

From the initial enquiry, our experienced team will be on hand to carry out a site survey to determine your exact requirements and work with you to create a tailored delivery schedule to suit your project deadlines.

SITE SOLUTIONS

We offer a flexible approach to suit your business that includes a one off supply or a complete managed design, stocking, logistics and installation service.

HOARDING

Hoard-it can be installed up to 4 times quicker and more efficiently than conventional hoarding.

Designed for use on construction sites, Hoard-it is durable and reusable to deliver complete flexibility.

Our engineered hoarding system is designed to withstand the demands of the industry and most UK weather conditions, thanks to heavy-duty load testing and robust steel upright supports with an electroplated finish.

The versatile structural design also enables the Hoard-it system to be placed in any location and on curves, dips, and inclines.

Our hoarding systems are versatile and flexible, that can easily be adapted to any site conditions with a variety of fixing options:

- **Half Mesh and Half Solid** – site visibility / onerous wind counts (i.e. coastal & rural areas)
- **Crowd Loading** – hoarding to withstand 0.74 / 1.5 / 3.0kn (i.e. universities, shopping centres, public areas and sports stadiums)
- **3M High** – extra height for enhanced security
- **Barbed Wire** – advanced security
- **TVCB's (Temporary Vertical Concrete Barriers)** – traffic and roadside protection
- **Gate Options** – vehicle and pedestrian gates
- **Lighting** – mains operated lighting for visibility
- **Accessories** – heavy duty protection mats to reduce slippage

COMMERCIAL

- ✓ Lower on-going project costs
- ✓ Rapid installation and easy reconfiguration
- ✓ Project specific design, installation and training
- ✓ Flexible hire or sale options
- ✓ Can be branded to suit your exact specifications

HEALTH & SAFETY

- ✓ No digging in the ground required
- ✓ Zero risk of service strikes
- ✓ Compliant with BS 5975 temporary works
- ✓ Wireless lighting options
- ✓ Site secured from day one

ENVIRONMENTAL

- ✓ 100% fully reusable components
- ✓ Environmentally sustainable
- ✓ Contributes to BREEAM points
- ✓ PEFC and FSC-certified boards
- ✓ No landfill costs to worry about

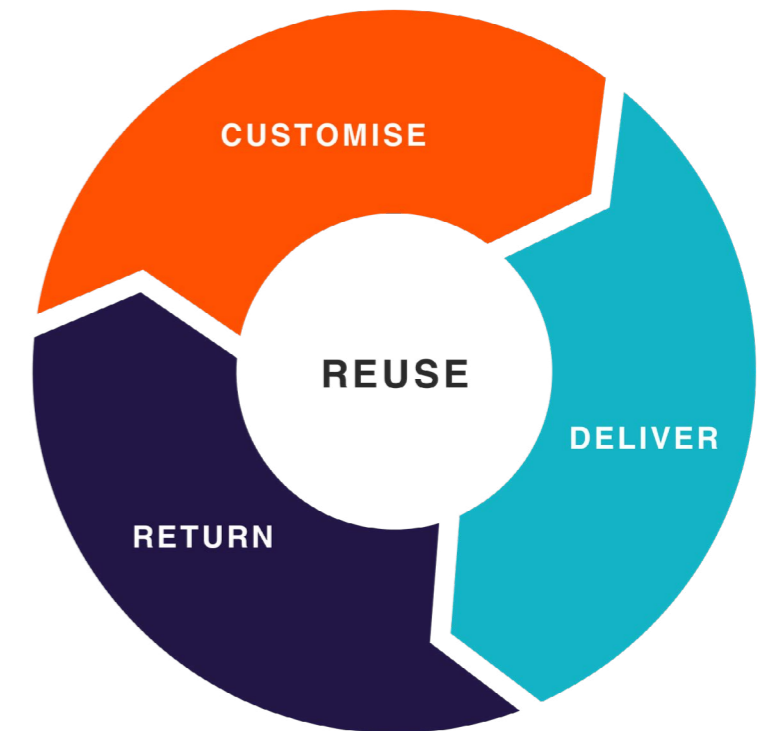

SUSTAINABILITY

Our **sustainable** hoarding system comprises of only **5 components**, all of which are fully **reusable**. All boards are pre-sealed to prevent water ingress and extend life. At Hoard-it, none of our timber boards have ever gone to landfill.

Compared to other plastic products on the market, this means that there isn't a need for components to be melted down and recycled for them to be reused. It's only at the end of their life that boards are recycled as either linings for cabins, loft insulation or Biofuel.

Our Hoard-it system was developed with the environment in mind – **100% reusable and recyclable components**.

1. Concrete Base
2. Base Plate
3. Inner Steel
4. Outer Steel
5. WISA Plywood

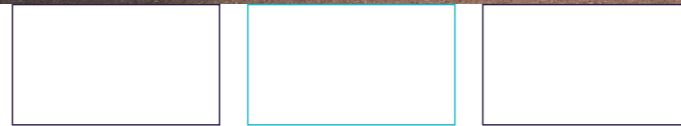

The credentials of our hoarding system support our client's own sustainability targets including assisting with **BREEAM** ratings, smart construction initiatives and zero waste targets.

Timber is the ultimate sustainable material. All our timber comes from sustainable and accredited sources. Wood is sourced from responsibly managed forests where forest growth exceeds felling rates. The production process is run entirely on renewables resulting in the industry's lowest emissions from forest to package. Our timber supplier plants 100 trees every minute and for every tree felled, they plant 4 more.

Carbon capture data is available with our wood stock, giving you (and your client) peace of mind that your perimeter is responsibly manufactured, with no waste.

Brand-it

Site Graphic Solutions

A division of Hoard-it, Brand-it provides site graphic solutions all in one place.

Our cost-effective graphics and branding packages provide clear and simple brand communication, helping you to effectively communicate your message across various target audiences.

Our graphic packages include:

- Graphic Panels
- Flush Fit Di-bond
- Branded Headers & Kickers
- Vinyl Wraps & Stickers
- Debris Netting (with printing option)
- Heras Fencing Banners
- Signage
- Banners
- Recyclable Graphic options available

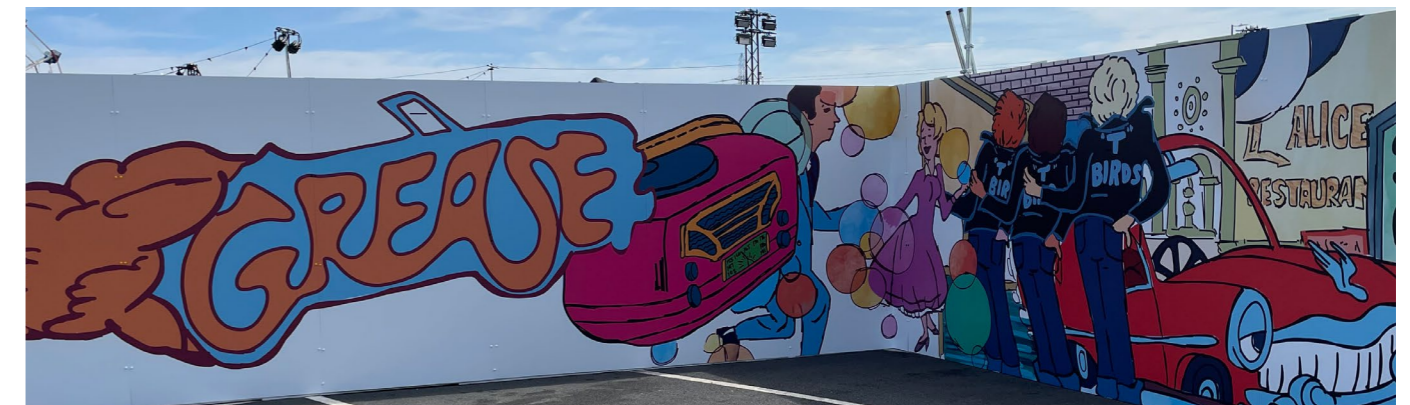

GRAPHIC PANELS

Utilise the Hoard-it system to advertise and promote your brand in a cost-effective manner.

Insert panels, made of economical PVC, easily slide and lock into the steel uprights of the system, providing a safe and secure surface for digital printing with the latest UV technology. This creates a visually striking point of contact with your target audience.

We offer two options for panels, including a more durable ACM (Aluminum Composite Material) version and an environmentally friendly and recyclable polypropylene option.

Depending on the volume of traffic and location of your project, we can apply various coatings such as easy wipe gloss laminates, anti-graffiti coatings, and super anti-graffiti coatings.

FLUSH FIT DI-BOND

If you want to make a significant impact in high traffic areas, such as city centres or areas with heavy vehicle traffic, large areas of hoarding can be utilised to achieve this goal.

This allows for a constant message and the opportunity to display high-resolution, four-colour images to promote your brand and increase awareness of your project.

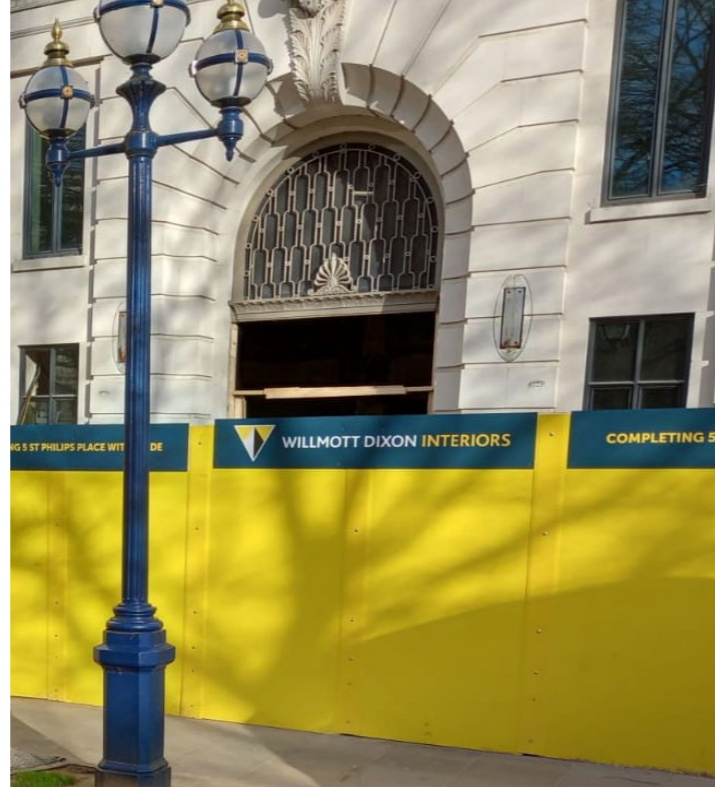

To maximise the effectiveness of your advertising, you can choose a combination of insert panels and flush-fit, which is suitable for those with a marketing budget.

BRANDED HEADERS & KICKERS

Effective corporate branding is essential for any business, as it communicates a recognisable image to the public.

With the use of UV digital technology, headers and kickers can be printed and laminated to create a visually appealing and cohesive design. This provides designers with the opportunity to showcase their creativity and create a striking visual impact wherever needed.

For those looking for a more cost-effective option, we also offer wooden headers and kickers that can be painted to match your hoarding design, based on a RAL reference.

HERAS FENCING BANNERS

Our Heras fencing banners are designed to fit perfectly on Heras fencing, measuring 1780mm in height and 3375mm in width.

The banners are printed on 300gsm mesh PVC using high-quality digital UV inks. This offers a cost-effective alternative to fixed graphics that can be reused from site to site with easy installation.

An ideal solution for sites with a limited advertising budget. An environmentally friendly material option is also available.

INSTALLATION

We provide complete brand communication solutions, covering every aspect from design, printing to installation.

Whether you are a site contractor or working directly with other stakeholders in the project, Brand-it offers an end-to-end service that includes everything from creation to installation.

VINYL WRAPS & STICKERS

Please note that this service is exclusively available for non-Hoard-it systems.

If you are utilising a hoarding system other than Hoard-it, we offer vinyl and vinyl wrapping applications, subject to a thorough site survey.

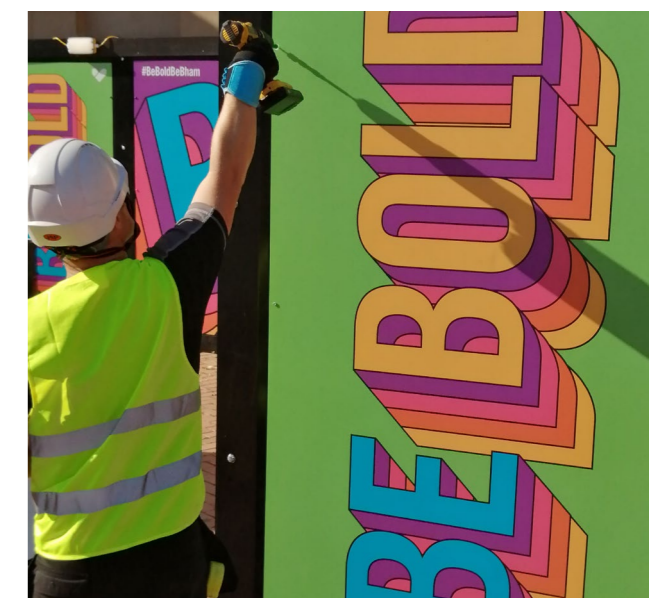

DEBRIS NETTING

In addition to fulfilling site health and safety requirements, debris netting offers an excellent marketing opportunity with optional advertising space.

Brand-it specialises in providing custom debris netting with printed logos or messages, available in various sizes for use as Scaffold Debris or Heras Debris netting.

Our debris netting is digitally printed with a step-and-repeat logo design using cost-effective UV ink technology.

We offer a range of widths and roll lengths to suit your needs. Simply supply us with your logo, and we will take care of the rest.

FINANCE

PURCHASE

Hoarding can be purchased with the option of a buy back, subject to condition and minus any transport, plant and dismantle costs.

WEEKLY HIRE

Charged per meter, per week and invoiced together with installation, plant, and transport charges. Dismantle, associated plant and transport costs are invoiced at the end of the hire period.

CONTRACT HIRE

A one-off charge payable at the start of the contract together with installation, plant, and transport charges, covering the specified hire period.

After this time, a two-week free of charge hire can apply if needed, followed by a new contract. Alternatively, a weekly hire rate can be re-negotiated at that time for any additional hire periods.

(Finance options apply to hoarding and gates only.)

SITE SOLUTIONS

SITE ACCOMMODATION

Our site accommodation buildings are supplied and fitted out to the highest standards using only the best quality fixtures and fittings, so that they are ready to use straightaway.

We have a diverse range of products available, offering both brand new and pre-owned portable cabins for sale or hire.

SOLAR POWERED SECURITY CAMERAS

Deployable anywhere and manoeuvrable for your adapting and developing site, this 360-degree tower has many features of a CCTV System and more.

A solution to provide a deterrent and protective measure, whilst being eco-friendly with zero carbon, fuel, noise, and maintenance.

TRACKWAY

Our trackway hire provides vehicle and personnel access for construction sites.

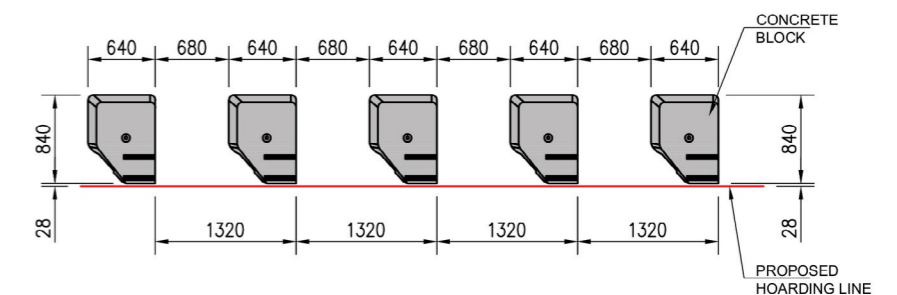

Made from recyclable engineering grade aluminium, our heavy-duty roadway panels are ideal for ground protection for very soft ground conditions, carrying weights of up to 100 tonnes.

INSTALLATION

POSITION CONCRETE BLOCKS

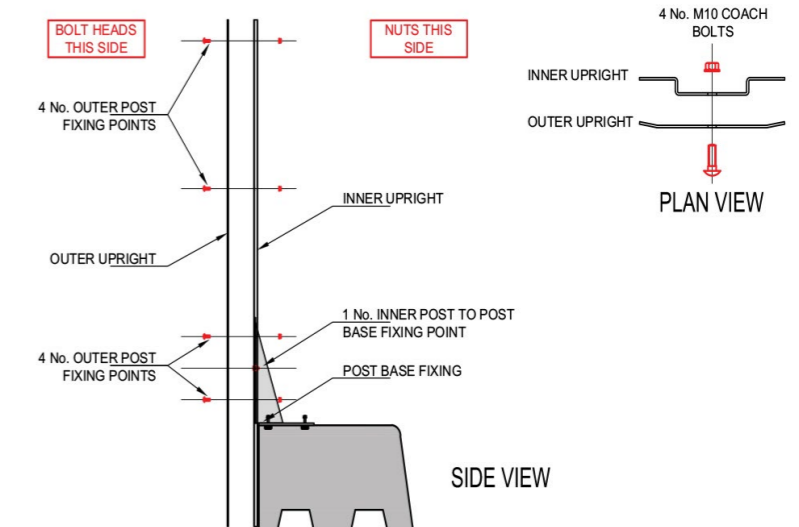

Position concrete blocks at 1320mm centres along the required perimeter, with the face of the blocks set 28mm back from the intended hoarding line.

MOUNT OUTER UPRIGHT POST TO FIRST CONCRETE BLOCK

Fix outer upright post loosely to inner upright post using 4 no. M10 coach bolts.

Full installation guide available on request.
